	<p>924 Pat., Cl. 1. A reversible urinal screen comprising: a plurality of interconnected cells that form a <u>tessellation of openings</u>, wherein a perimeter of each of a majority of openings of the <u>tessellation of openings</u> is at least partially defined by three or more braces of a plurality of braces, with a majority of the plurality of braces being shared by multiple openings; and a plurality of posts to deflect urine when the reversible urinal screen is placed upon a urinal surface, the plurality of posts connected to the plurality of braces and positioned such that:</p> <p>when the reversible urinal screen is placed upon the urinal surface in a first orientation, a first plurality of tips of the plurality of posts support the plurality of braces above the urinal surface, and a second plurality of tips of the plurality of posts are positioned above the plurality of braces, and</p> <p>when the reversible urinal screen is placed upon the urinal surface in a second orientation, the second plurality of tips of the plurality of posts support the plurality of braces above the urinal surface, and the first plurality of tips of the plurality of posts are positioned above the plurality of braces, and</p> <p>wherein at least some of the plurality of braces comprise contoured upper and lower surfaces to deflect urine when the reversible urinal screen is placed upon the urinal surface in either of the first or second orientations.</p>	
8.	<p><b>“post”</b>  (098 Pat., Claims 19, 38; 924 Pat., Claims 1, 21 and 28)</p>	<p>elongated element that serves as support, having a height in excess of its width</p>

	<p>098 Pat., Cl. 19. A urinal screen comprising:  a frame having:  a first face;  a second face opposite the first face; and  a plurality of interconnected cells at least partially defined by a plurality of braces that intersect at comers, the plurality of interconnected cells comprising at least a plurality of perimeter cells and a plurality of interior cells;  wherein the plurality of interior cells comprises a first cell, a second cell, and a third cell, said first cell and said second cell each partially defined by a first brace positioned between said first cell and said second cell, said second cell and said third cell each partially defined by a second brace positioned between said second cell and said third cell, and said first cell and said third cell each partially defined by a third brace positioned between said first cell and said third cell;  wherein each of the first brace, the second brace, and the third brace comprises a first end and a second end, and wherein:  the first end of the first brace intersects at a comer with the two other braces;  the first end of the second brace intersects at a comer with the two other braces; and  the first end of the third brace intersects at a comer with the two other braces;  a plurality of first <u>posts</u> each connected to a brace or corner of the frame and extending from away from the first face of the frame, and</p>
